

ASX Release

ASX Code: RLC

30 April 2020

Quarterly Report for the period ended 31 March 2020

- New project development focussed on lithium brine projects located in South America and gold projects located in Australia.
- Gold potential identified at Burracoppin.
- Joint venture partner sought for Burracoppin Iron-ore project.

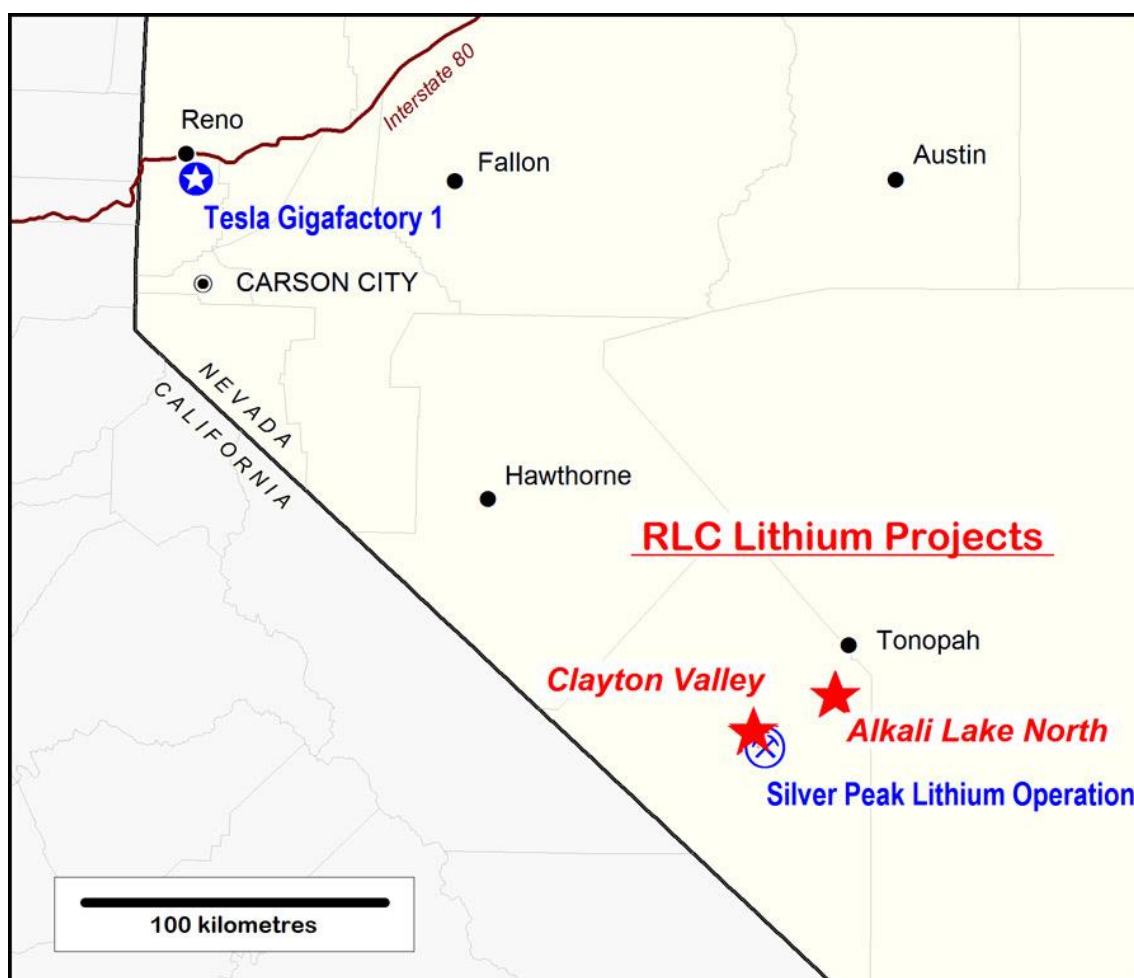

CURRENT EXPLORATION ACTIVITIES

Nevada Lithium Brine Projects (Nevada, USA) Lithium

Alkali Lake North:	128 claims –	2,554 acres	(1,033 ha)
Clayton Valley:	112 claims –	2,240 acres	(906 ha)

The Nevada lithium brine projects comprise two projects: Alkali Lake North and Clayton Valley. The projects are located in large and separate ground water catchment areas in Nevada, USA. The projects are within 25 kilometres of the Silver Peak Lithium brine operation owned by Albemarle Corp. which is located 360 kilometres by road (US-95 route) from the Tesla Gigafactory (Lithium-ion batteries) in Reno.

Quarterly activities report for the period ended 31 March 2020

CLAYTON VALLEY PROJECT

No field work was conducted on the Clayton Valley project during the quarter.

A brine target potentially comprising a 200 metre thick interval of sediments containing multiple brine filled aquifers has been identified in audio magnetotelluric (3D AMT) survey data (refer [ASX release 23/08/2018](#)).

Work on hold but planned includes drilling the brine target in order to recover water samples to test for dissolved lithium. Seismic survey to gain additional data to aid delineation of potential aquifers associated with the target prior to drilling is also under consideration.

ALKALI LAKE NORTH PROJECT

No field work was conducted on the Alkali Lake North project during the quarter.

A brine target potentially comprising multiple brine aquifers within sediments over a vertical interval from 500 to 600 metres below ground surface has been identified in audio magnetotelluric (3D AMT) survey data (refer [ASX release 28/08/2018](#)).

Work on hold but planned includes drilling the brine target in order to recover water samples to test for dissolved lithium. Seismic survey to gain additional data to aid delineation of potential aquifers associated with the target prior to drilling is also under consideration.

REHABILITATION WORK - COLUMBUS SALT MARSH AREA

The Columbus Salt Marsh project was divested at the end of August 2019 and areas disturbed by the Company's prior drilling activities were contoured and seeded later that year. The rehabilitation work completed is subject to review by the Bureau of Land Management ("BLM") and if accepted will result in refund of the remaining bond moneys for this project (US\$21,599). The review is likely to be undertaken during Spring (19 March to 19 June).

SOUTH AMERICAN LITHIUM BRINE OPPORTUNITIES

During the report period assessments of lithium brine projects located in Chile were continued. Opportunities were identified but investigations have been placed on hold pending increased investment interest in lithium.

Reedy Lagoon's strategy for lithium:

The Company sees strong long-term demand fundamentals for battery-grade lithium products resulting from the growth in the use of lithium-ion batteries in electric vehicles, energy storage systems and portable electronics. Short term demand may be effected by the global fall in motor vehicle sales including battery electric vehicles in reaction to the measures implemented to contain the spread of COVID-19 but the long term demand fundamentals are likely to remain strong.

Quarterly activities report for the period ended 31 March 2020

From a mining point of view there are two alternative sources of lithium. One is from hardrock ore deposits, which are most commonly based on spodumene minerals but also include lepidolite, petalite and others. The other source is from brines (saline ground water), commonly salt lakes (or “Salars”) with high lithium concentrations and where the lithium exists typically as lithium chloride in solution.

Where suitable brine compositions and process methods allow, production costs for battery-grade lithium products from brines can be less than from hardrock (mineral) deposits.

Reedy Lagoon has targeted brine sources of lithium because it intends becoming a low-cost producer of battery grade lithium.

In 2016 when the Company initiated its Nevada lithium brine projects, a new way to extract lithium from brines located in Clayton Valley, Nevada had been reported by Pure Energy Minerals (a “direct extraction” method). The new direct extraction method not only had low projected operating costs for battery-grade lithium carbonate and lithium hydroxide production but most importantly, involved extraction of the lithium as a first step allowing the bulk of the brine to be returned to the basin. All existing production of lithium from brines involves pre-treating the brine prior to extracting the lithium and this pre-treatment involves pumping the brine through vast evaporation ponds from which the bulk of the brine water is evaporated.

Reedy Lagoon now considers there are at least 3 alternative direct extraction process methods that might enable commercial production of lithium from brine. Two are being developed in Nevada: Pure Energy is continuing its work in Clayton Valley having introduced a partner to build a pilot plant for its process, Daijin Resources Corporation has a project in Alkali Lake (Nevada) and is developing a method using magnetic separation of the lithium from the brine and Eramet has reported it and its partners have developed an active solid which selectively removes lithium from the brine.

The critical importance of the direct extraction processes is their potential to drastically reduce the volume of water consumed by enabling the brine to be returned to the basin unchanged other than by the removal of lithium.

Water rights control access to ground water including lithium-bearing brine. While the mineral rights including the ownership of lithium contained in a brine, are held in a Placer Claim (under Nevada legislation) the legal right to pump ground water from a basin is controlled separately. Water in deserts is a valuable and scarce commodity. Water rights as a consequence are highly regulated and allocations are restricted.

Reedy Lagoon’s two lithium brine projects in Nevada each have brine targets defined in detailed geophysical data (3D-AMT). There are insufficient water rights available for conventional evaporation-pond based brine processing at either of the Company’s projects. Accordingly, the Company intends holding and maintaining its existing brine projects while minimising its expenditure on them until a suitable direct extraction process is available.

AUSTRALIAN PROJECTS

Burracoppin Project (WA)

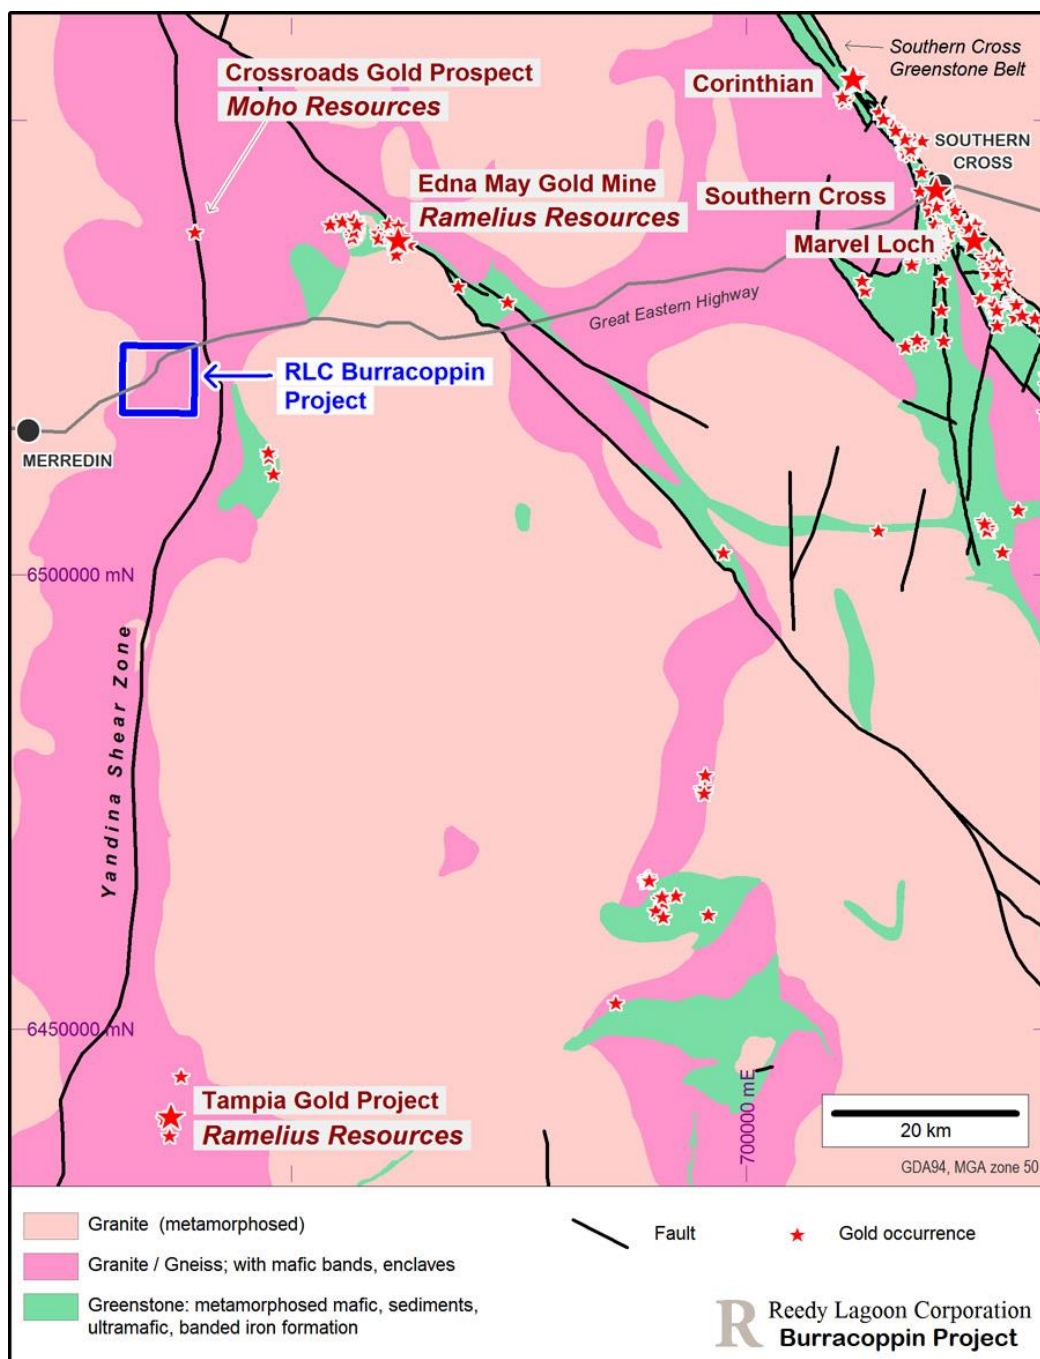

Magnetite + Gold

RLC 100% E70/4941 (area 5,854 Ha)

No field work was conducted during the report period.

Gold:

During the report period a review of gold mineralisation targets generated ideas which are being followed up in the current quarter. The tenement area is located in a belt of geology that hosts the Tampia gold project to the south and the Edna May gold mine to the north east (both these operations are owned by Ramelius Resources Limited). In addition, Moho Resources Limited has recently reported success in drilling at its Crossroads gold prospect located to the north.

Quarterly activities report for the period ended 31 March 2020

Magnetite (Iron-ore”):

Prior activities on the Burracoppin project have identified a strongly magnetic feature which core drilling proved to be caused by magnetite mineralisation ([ASX release 31 January 2013](#)). Metallurgical test work conducted on samples from the drilling has shown that high-quality iron concentrate can be produced at a relatively coarse particle size (p80 -150 micron) (ASX releases dated [18 January 2013](#) and [17 November 2014](#)). Potential development options for the project in the event further work identifies sufficient mineralisation to establish a resource include producing a high quality iron concentrate for sale to smelters and/or further processing the Burracoppin concentrate using HIs melt to produce a high-quality Pig Iron for export (ASX release dated [10 September 2019](#)).

Work on hold but planned includes further drilling at the Burracoppin magnetite deposit to establish a resource as the next step in extending the investigations into the project’s viability.

The Company is seeking a partner to assist with the next stage of development of the Burracoppin project. The project is well positioned with existing open access infrastructure including, rail and port facilities. These attributes are positive for rapid development to benefit from positive market conditions.

Market outlook for iron-ore prices is mixed. COVID-19 induced shutdowns in China are reported to have cut blast furnace utilisation, which would likely cause a drop in demand for iron-ore, being offset by virus related drops in production of iron-ore. The production drops have taken place in Canada, Peru and South Africa and have involved higher grade product (64-66%Fe sinter fines/lump) which has potential to increase the premiums for higher grade product.

NEW PROJECT DEVELOPMENT

Potential new projects reviewed during the period included lithium brine prospects in South America and gold in Australia. New project development is ongoing.

COMMENT

At 31 March Reedy Lagoon had \$276,719 in bank accounts and deposits. The Company also had the amount of US\$21,599 (A\$30,856) in a security bond held by the Bureau of Land Management (USA) for the Company’s relinquished Columbus Salt Marsh project in North America. This remaining bond amount is expected to be refunded following satisfactory assessment of the Company’s rehabilitation of areas disturbed by the Company’s drilling.

Additional funding is required to fund planned exploration. The Company’s preferred source of funding for this work is from farm-in arrangements with companies entering joint ventures.

Quarterly activities report for the period ended 31 March 2020

FORTHCOMING ACTIVITIES

Project	Activity Planned	Timetable
Burracoppin <i>Gold</i> <i>Iron-ore (magnetite)</i>	Data review and program planning. Additional drilling to establish resources. ¹	Jun Q TBD
New Project Development <i>Gold & other</i>	Office studies to assess and build new projects.	On going
Alkali Lake North <i>Lithium</i>	Seismic survey ¹ Drill to test conductivity targets. ¹	TBD
Clayton Valley <i>Lithium</i>	Seismic survey ¹ Drill to test conductivity targets. ¹	TBD
Relinquished project (<i>Columbus Salt Marsh</i>)	Rehabilitation of drill site and access track completed subject to review.	Jun Q 2020

Note 1: Subject to funding or farm-out

TBD : to be determined.

Competent Person's Statement:

The information in the section headed "Nevada Lithium Brine Projects" of this report as it relates to exploration results and geology was compiled by Mr Geoff Balfe who is a Member of the Australasian Institute of Mining and Metallurgy and a Certified Professional. Mr Balfe is a consultant to Reedy Lagoon Corporation Limited. Mr Balfe has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Balfe consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

The information in the section headed "Australian Projects" in this report that relates to Exploration Results is based on information compiled by Geof Fethers, who is a member of the Australian Institute of Mining and Metallurgy (AusIMM). Geof Fethers is a director of the Company and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for the Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code). Geof Fethers consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Company Statement:

Where Exploration Results have been reported in earlier RLC ASX Releases referenced in this report, those releases are available to view on the INVESTORS page of reedylagoon.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in those earlier releases. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

\$A'000**

-

-

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. Financing facilities	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
<i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1 Loan facilities	-	-
7.2 Credit standby arrangements	-	-
7.3 Other (please specify)	-	-
7.4 Total financing facilities	-	-
7.5 Unused financing facilities available at quarter end		-
7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (Item 1.9)	(49)
8.2 Capitalised exploration & evaluation (Item 2.1(d))	-
8.3 Total relevant outgoings (Item 8.1 + Item 8.2)	(49)
8.4 Cash and cash equivalents at quarter end (Item 4.6)	227
8.5 Unused finance facilities available at quarter end (Item 7.5)	
8.6 Total available funding (Item 8.4 + Item 8.5)	227
8.7 Estimated quarters of funding available (Item 8.6 divided by Item 8.3)	4.6
8.8 If Item 8.7 is less than 2 quarters, please provide answers to the following questions:	
1. Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
2. Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	
3. Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A	

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 30 April 2020

Authorised by: the board.
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
