

7 September 2021

RLC secures additional ground for lithium project in Nevada

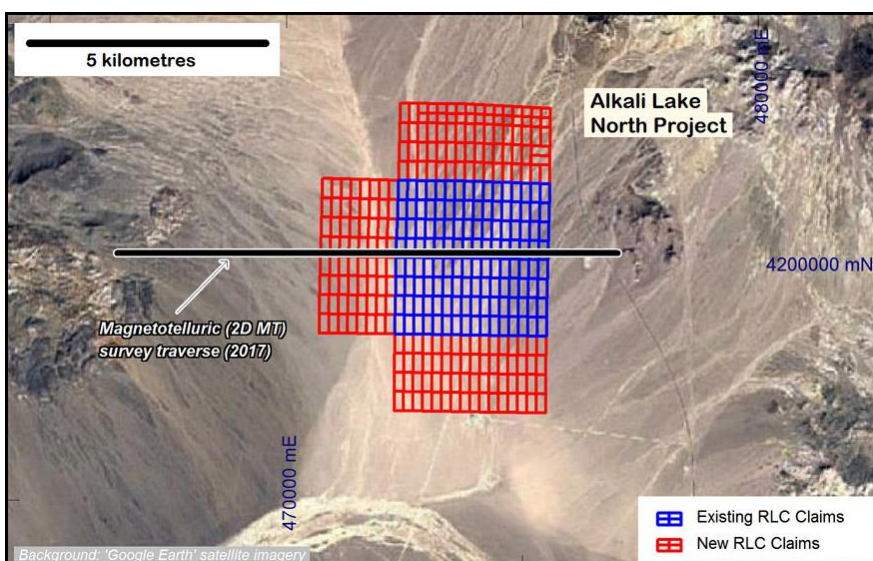

RLC has successfully staked an additional 186 placer claims in Nevada adjoining its Alkali Lake North project. The project area now covers the full extent of the lithium brine target identified in the Company’s geophysical survey data.

The target is a shallow conductor identified in magneto-telluric data (2D MT) (refer ASX [release 29/05/2017](#)). Prior reporting excluded information from outside the area then held by RLC.

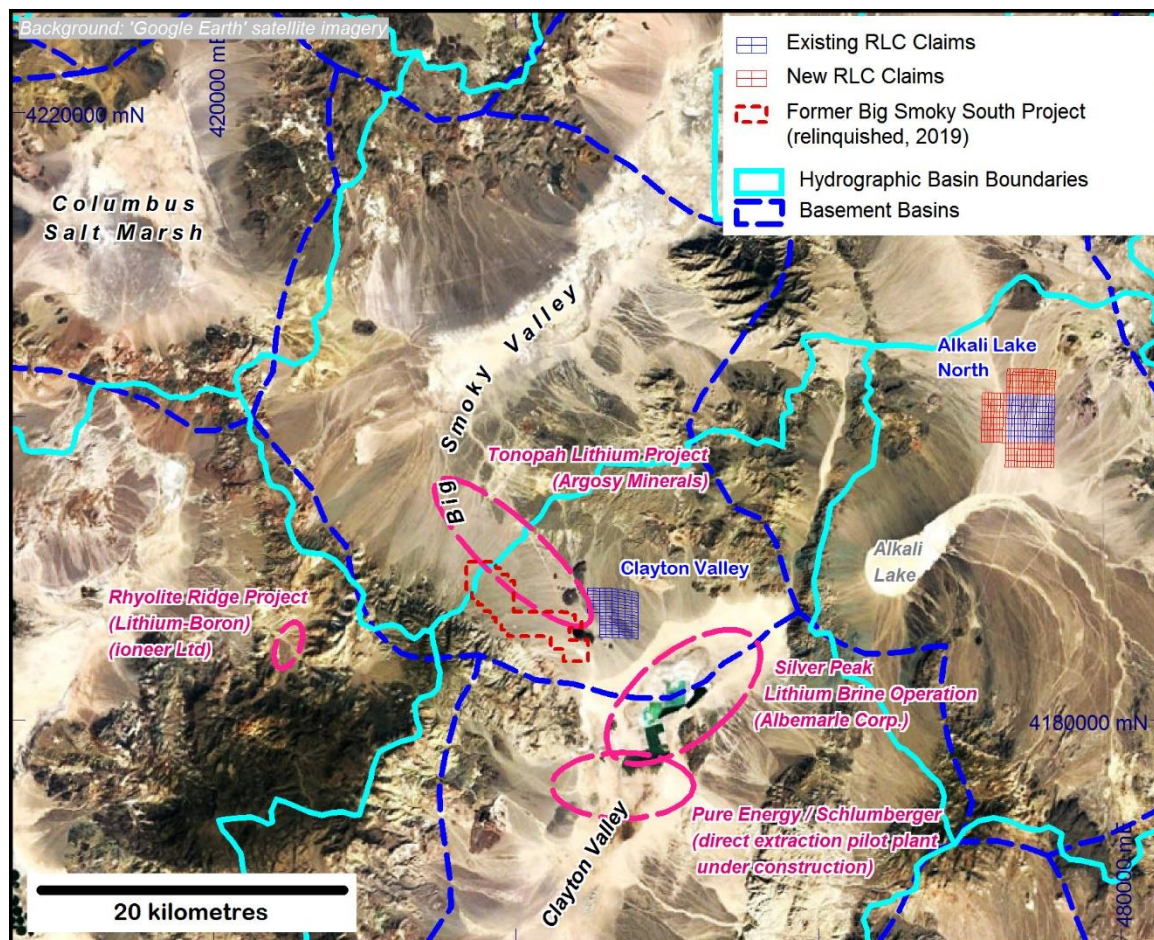

Reinterpretation of the 2D MT data made with the benefit of work done by RLC on other lithium brine projects in Nevada, has generated greater focus on the upper conductor evident in the data from the Alkali Lake North project (white arrows in image below).

The additional ground now staked (1,554 hectares) together with existing claims (1,042 hectares) at the Alkali Lake project fully secures the prospective area.

Further geophysical surveys, including 3D MT and seismic, are planned to better define lithium-brine targets at Alkali Lake North project and also at the Company's Clayton Valley project.

The Company raised \$1.1m from a placement made on 2 September 2021 (refer ASX Release [03/09/2021](#)) to fund development of the lithium brine projects, further gold exploration at Burracoppin and to provide working capital.

Authorised for release on behalf of the Company.

Competent Persons Statement

The information in this report as it relates to exploration results and geology was compiled by Mr Geoff Balfe who is a Member of the Australasian Institute of Mining and Metallurgy and a Certified Professional. Mr Balfe is a consultant to Reedy Lagoon Corporation Limited. Mr Balfe has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Balfe consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Company Statement:

Where Exploration Results have been reported in earlier RLC ASX Releases referenced in this report, those releases are available to view on the [INVESTORS page](#) of reedylagoon.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in those earlier releases. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Table 1. JORC 2012 sampling techniques and data.

JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> • <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> • <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> • <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> • <i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i> 	<ul style="list-style-type: none"> • The Company has not collected surface geochemical samples
Drilling techniques	<ul style="list-style-type: none"> • <i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i> 	<ul style="list-style-type: none"> • No drilling undertaken
Drill sample recovery	<ul style="list-style-type: none"> • <i>Method of recording and assessing core and chip sample recoveries and results assessed.</i> • <i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i> • <i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i> 	<ul style="list-style-type: none"> • N/A

Criteria	JORC Code explanation	Commentary
Logging	<ul style="list-style-type: none"> • Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. • Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. • The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> • N/A
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> • If core, whether cut or sawn and whether quarter, half or all core taken. • If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. • For all sample types, the nature, quality and appropriateness of the sample preparation technique. • Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. • Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. • Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> • N/A
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> • The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. • For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. • Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. 	<ul style="list-style-type: none"> • N/A
Verification of sampling and	<ul style="list-style-type: none"> • The verification of significant intersections by either independent or alternative company personnel. 	<ul style="list-style-type: none"> • N/A

Criteria	JORC Code explanation	Commentary
assaying	<ul style="list-style-type: none"> The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data. 	
Location of data points	<ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control. 	<ul style="list-style-type: none"> N/A
Data spacing and distribution	<ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied. 	<ul style="list-style-type: none"> N/A
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> N/A
Sample security	<ul style="list-style-type: none"> The measures taken to ensure sample security. 	<ul style="list-style-type: none"> N/A
Audits or reviews	<ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> N/A

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral	<ul style="list-style-type: none"> Type, reference name/number, location and ownership including 	<ul style="list-style-type: none"> Existing Placer Claims have been staked and duly recorded with

Criteria	JORC Code explanation	Commentary
<p><i>tenement and land tenure status</i></p>	<p><i>agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></p> <ul style="list-style-type: none"> <i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i> 	<p>Esmeralda County and filed with the Bureau of Land Management (BLM).</p> <ul style="list-style-type: none"> BLM receipts for the filing of the existing WH Claims (Alkali Lake Valley) and the CV Claims (Clayton Valley) are in the possession of the Company. The claims have been staked by Sierra Lithium LLC, a wholly owned US subsidiary of Nevada Lithium Pty Ltd. 186 new Placer Claims designated WH129 to WH 314 have been staked at Alkali Lake Valley. The Company has 90 days from the date of marking out to record the claims with Esmeralda County and file them with the Bureau of Land Management.
<p><i>Exploration done by other parties</i></p>	<ul style="list-style-type: none"> <i>Acknowledgment and appraisal of exploration by other parties.</i> 	<ul style="list-style-type: none"> There is no record of lithium exploration on any of the subject placer claims. TSX company Ultra Lithium has reported elevated lithium values up to 270 ppm in diamond drilling on its Big Smoky Valley property which is 15km north west of RLC's Big Smoky Valley South property (TSX-V:ULI 7 July 2016). Dajin Resources Corporation is conducting exploration on Alkali Lake 9km to the south west of RLC's Alkali lake property and has reported lithium values up to 383 ppm in 12 surface samples. Dajin has completed extensive geophysical surveys including gravity surveys which indicate a local sub-basin more than 1200m deep. This sub basin continues to the north and may be connected to the basin that is covered by RLC's placer claims at Alkali Lake. The Silver Peak Lithium Operation is located 9km south east of RLC's Big Smoky Valley South property and 25km south west of RLC's Alkali Lake property. Albemarle does not report lithium production from Silver Peak but production has been estimated to be about 6,000 tonnes of lithium carbonate per year. Nevada Sunrise (TSX-V:NEV) has reported Hole CNE-16-03, drilled to a total depth of 591.3 metres (1,940 feet) at Clayton Valley north east has intersected multiple aquifer formations, including 387.69 metres of brine-producing strata averaging 243.66 milligrams per litre ("mg/l") lithium from a depth of 209.23 to 596.92 metres, including a higher grade interval averaging 299.5 mg/l lithium over 36.92 metres.

Criteria	JORC Code explanation	Commentary
		<p>Note: 1.0 mg/l = 1.0 ppm.</p> <ul style="list-style-type: none"> Pure Energy Minerals Ltd (TSX:PE) has released a NI43-101 compliant Inferred Resource for their property in the Clayton Valley south east area based on the results of two completed wells and detailed gravity and seismic reflection surveys during 2014-15 that confirmed a deep structural trough on its claims and identified 19 reflectors from sediment layers that correspond to previously identified Li-aquifer horizons. Two exploratory boreholes were completed in the north end of the claims. CV-1 “twinned” the Rodina hole SPD-9, and CV-2 explored new ground further south. Pumping tests completed for 8 hrs in CV-1 provided positive results of 150 gpm (9.5 L/s) and 225 ppm Li. An Inferred Resource of 816,000 metric tonnes of Lithium Carbonate Equivalent (LCE) has been calculated based on borehole sample chemistry, seismic and gravity interpretations of basin stratigraphy.
Geology	<ul style="list-style-type: none"> <i>Deposit type, geological setting and style of mineralisation.</i> 	<ul style="list-style-type: none"> Although there is no sub-surface geological information available for any of the properties there is a generally accepted geological model for lithium brines in closed basins in Esmeralda County, Nevada. Where drill hole data exists the basins are characterized by multiple alternating aquifers consisting of sandy or gravelly beds with intercalated fine grained sediments including clay beds (derived from decomposition of tuffa deposits), fine volcanic ash layers, and alluvial silty deposits. In Clayton Valley at least eight lithium brine enriched aquifers have been recognized.
Drill hole Information	<ul style="list-style-type: none"> <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <i>easting and northing of the drill hole collar</i> <i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i> <i>dip and azimuth of the hole</i> <i>down hole length and interception depth</i> <i>hole length.</i> 	<ul style="list-style-type: none"> N/A

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. 	
Data aggregation methods	<ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated. 	<ul style="list-style-type: none"> N/A
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). 	<ul style="list-style-type: none"> N/A
Diagrams	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	<ul style="list-style-type: none"> N/A
Balanced reporting	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> N/A
Other substantive exploration data	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential 	<ul style="list-style-type: none"> 2D magneto telluric surveys carried out by Zonge International in 2018 over Alkali Lake has defined two conductive layers that are compatible with brine layers.

Discussion of relative accuracy/confidence	<ul style="list-style-type: none"> • <i>Where appropriate a statement of the relative accuracy and confidence level in the Ore Reserve estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the reserve within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors which could affect the relative accuracy and confidence of the estimate.</i> • <i>The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.</i> • <i>Accuracy and confidence discussions should extend to specific discussions of any applied Modifying Factors that may have a material impact on Ore Reserve viability, or for which there are remaining areas of uncertainty at the current study stage.</i> • <i>It is recognised that this may not be possible or appropriate in all circumstances. These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.</i> 	<ul style="list-style-type: none"> • N/A
